

TITAN Fuel Tanks TECHNICAL BULLETIN

April 12, 2012 Revision

REGARDING: Installation of TITAN 8020099-191 in place of FORD 37 gallon tank.

TITAN has been contacted about using its 40 gallon 8020099-191 tank in the place of FORD's 37 gallon diesel tank applications. Several sources have indicated that FORD is no longer producing replacement 37 gallon tanks. TITAN's product can be used in place of the 37 gallon tank, however, a modification of the sending unit will be required as shown in the installation instructions. Also, the straps and, if applicable, the skid plate in most cases will need to be either modified, or fabricated from scratch. TITAN notes this in its installation instructions for the product.

Recently it has come to light that FORD makes an alternative strap set and skid plate to fit this vehicle which allows the installation of the 40 gallon 8020099-191 TITAN tank. Here are the parts required with corresponding FORD part numbers:

- | | | | |
|----|-------|--------------|------------|
| A) | 2 ea. | #6C3Z9092AA | Straps |
| B) | 1 ea. | #3C3Z9A147AA | Skid Plate |

These should be available from the customer's local FORD dealer or TITAN Fuel Tanks. Call TITAN's Customer Service if you have any questions.
