Hello TITAN,

“We bought Titan’s Fuel Caddy for our shop. Before, we had a piece-of-junk setup with a battery attached (a fire hazard!).

Now we use the Caddy not only for taking fuel out of OEM tanks and putting it back in the new Titan tank, but for transferring fuel from one vehicle to another, or easily removing fuel from cars to meet the requirements at car shows. It rolls around super easy, and cleans the fuel as it transfers. It is super convenient and a great time saver.

It was a good move for us to get the Fuel Caddy in our shop!”
